3D Input Devices

Set Pro/ENGINEER on Fire

Ignite your productivity to new heights with Pro/ENGINEER Wildfire. 3Dconnexion navigation input devices speed up the entire design process. View a model from different angles while using the mouse to resize extrusions, rounds, and other features. You'll never work with just a mouse again!

Why Pro/ENGINEER Wildfire Users rely on Navigation Devices

Improve productivity by up to 30%; reduce mouse usage by over 50%

Pan, zoom and rotate in one fluid motion; without your mouse

Work smarter and more comfortably, with less body strain

Assign Mapkeys to speed keys on the device for quick access

Program unlimited Pro/ENGINEER Mapkeys for each environment

Watch functions update automatically as you move between environments

Blazing fast Navigation: Pan, zoom, and rotate all at once in one fluid motion, without the mouse!

One-touch access to Mapkeys: Set SpacePilot LCD keys to store Pro/ENGINEER Mapkeys for quick command access while navigating. Newly programmed functions are instantly displayed in the LCD. Unlimited sets of functions for Sketch, Part Modeling, Assembly or any other environment are available using multiple banks of mappings.

Streamline all work modes from Sketch through Assembly:

Sketch Mode: Use the mouse to sketch and simultaneously use SpacePilot in the other hand to optimally position and reposition the work plane. Inspect your sketch from multiple positions. Access commands like Sketch Orientation, Continue/Quit with a single click of the programmable keys.

Part Modeling Mode: Use the SpacePilot to view the model from several different view angles while simultaneously using the mouse to adjust the "drag handles" on the model to resize extrusions, rounds, chamfers, fillets or other features being created.

Assembly Mode: Activate the "drag a packed component" function by pressing the speed key on the SpacePilot. Or add dimensions and annotations by mapping those functions to the device buttons. SpacePilot senses which work mode you are in and automatically brings up new commands to streamline your workflow.

Drawing Mode: Easily position the drawing view at the optimal location on the drawing area. Use the mouse to reposition the drawing view, and at the same time, move the entire drawing surface with the SpacePilot. Map functions like dimensions and special symbols to keys for rapid access in drawing mode.

Accelerate Preview Mode: Use the mouse to select, then pan, zoom and rotate the preview of the item with the SpacePilot. Accelerate all preview actions including File Open, Insert Component, Insert Fitting, Drawing Symbol Instance Palette, and Custom Drawing Symbol.

NAVIGATE YOUR 3D WORLD
