## AutobuildZ for Pro/ENGINEER

### As easy as 1, 2, 3D

With AutobuildZ, a plug-in application for Pro/ENGINEER Wildfire, design engineers have a comprehensive set of tools to create parametric, fully-featured 3D designs from 2D drawings by using a simple, wizard-based approach.

Feature wizards allow designers to select elements that define Pro/ENGINEER features directly from the drawing. Got extruded and revolved features needing valid section profiles? The fixing tools are right there in the feature wizards. And, creating fully detailed drawings from your new 3D design, with orthographic, section, detail and auxiliary views is a matter of clicks.

When we say easy, we mean easy.

### Capabilities & Benefits:

- Use wizards to create Pro/ENGINEER features from 2D drawings
- Have constant visual feedback in 3D and 2D during feature creation
- Create automated drawings with associated views of the 3D design
- Select from multiple interactive tools for ease of use
- Rebuild designs from single, familiar drawing environment
- Increased efficiency from conversion of existing 2D data to 3D designs
- Training of current 2D workforce in 3D modeling concepts
