## AutoCAD<sup>®</sup> LT 2008

AutoCAD LT<sup>®</sup> Software, the world's number one-selling 2D drafting product, just got better. No matter what phase of the 2D design process you find yourself in, AutoCAD LT<sup>®</sup> makes it more productive. From drafting to publishing to sharing, new tools and features focus on getting you through your everyday tasks quicker and with fewer errors. Simply put, you will create, collaborate, and deliver more efficiently than ever.

Efficient drafting means across-the-board improvements to help ensure that the time-consuming tasks you do every day will not slow you down. Simplified data exchange leads to fast, secure collaboration among team members no matter where they are, because the quicker you share, the quicker you finish. Painless plotting means you can spend more time on the front end designing and less time on plotting.

### Improved Features:

- Multiline Text (MTEXT)
- Data Extraction (Block Attributes and Objects)
- Tool Palettes
- Layer States
- Tables
- Views/Viewports
- Dimensioning
- Use DWF as an Underlay/Reference

### What's New in AutoCAD LT

AutoCAD LT<sup>®</sup> software makes all parts of the 2D design process more productive. From DWG native file format compatibility to dynamic blocks, to annotation scaling and table enhancements, daily tasks are simplified, helping you concentrate on the design instead of the toolset.

#### Annotation Scaling

AutoCAD LT 2008 introduces the concept of annotation scale as an object property. Designers can set the current scale of a viewport or model space view, and then apply that scale to each object and specify its size, placement, and appearance based on the scale set for the viewport. In other words, annotation scale is now automated.

#### Layers per Viewport

In AutoCAD LT 2008 the layer manager has been enhanced to allow users to specify color, line weight, line type, or plot style as an override for an individual viewport. These overrides can be easily turned on or off as viewports are added or removed.

#### Enhanced Tables

Enhanced tables now give users the option to combine AutoCAD LT and Windows<sup>®</sup> Excel<sup>®</sup> tabular information into a single AutoCAD LT table. This table can be dynamically linked so that notifications appear in both AutoCAD LT and Excel as data is updated. Users can then select these notifications, allowing instant updating of information in either source document.

#### Text & Table Enhancements

The enhanced MTEXT editor now provides the ability to specify the number of columns required and flows new text between those columns as users make edits. The space set between each column of text and the edge of the paper is also customizable. All of these variables can be adjusted to specific values in the dialog box, or adjusted interactively using the new multicolumn text grips.

#### Multiple Leaders

The new multiple leader panel on the dashboard has enhanced tools that automate the creation of multiple leaders and the orientation of the leaders (tail or content first) with the notes.
