## Pro/ENGINEER Behavioral Modeling

### Design optimization

Inferior design practices inflate product development costs due to wasted material, excessive shipping expense, and poor product performance. Ideally, engineering would be able to embed real-world design requirements -- even for multiple objectives -- within the digital model so that these criteria are perpetually satisfied. With Pro/ENGINEER Behavioral Modeling, this optimized way of designing is a reality.

### Capabilities & Benefits:

- Associatively embed design requirements within models, perpetually solving real problems involving multiple design goals
- Assess model sensitivity to understand the effects of change on design objectives
- Integrate results with external applications such as Microsoft Excel via an open environment
- Enable consideration of all design requirements, regardless of construction method, to produce optimal designs
- Run experimental design studies crossing multiple functional areas of Pro/ENGINEER

### Design Intelligence

Easily build design intelligence directly into the design model.

### Design Studies

Gain unparalleled understanding of the design space via multi-objective design studies.
