Pro/ENGINEER Prismatic & Multi-surface Milling Extension

Complete Milling

Not all CAM solutions are created equal. Some tools emphasize easy-of-use, others promote cost advantages. The best solution for directly machining product parts on production lines would be price competitive, feature-rich, yet, unlike other CAM tools, it would enjoy seamless compatibility with the design. This is Pro/ENGINEER Prismatic and Multi-Surface Milling. A virtual milling "specialist" for prismatic machining, it greatly and affordably increases NC productivity.

Capabilities & Benefits

- Multi-surface, 3-axis milling, including support for 4-axis and 5-axis positioning
- NC Program creation, process documentation, post-processing and toolpath verification and simulation
- Improves product quality and manufacturing consistency by generating toolpath directly on solid models
- As part of an integral CAD/CAM solution, no data translation is required
- Reduces time to market with associative toolpath updates to design changes
