ProductView

Unsurpassed Visual Collaboration

Product development involves a variety of content from many different sources. One of the biggest issues faced by many manufacturers is how to efficiently share the large volume of digital product content created throughout the product development process. ProductView offers superior integration with Windchill, Pro/ENGINEER, a variety of MCAD and ECAD applications and over 200 other document types. With ProductView, everyone who needs to can view, markup, interact and collaborate on all forms of digital product data.

Capabilities

- Provide product information access to all team members in a Web-centric and scalable environment
- View a myriad of product data (e.g., MCAD/ECAD files, MS Office documents) without the authoring application
- Accurately measure, section and compare 3D models, and assemble parts and complex product structures
- Collaborate on centrally organized digital product information through markups and real-time collaboration
- Improved productivity by allowing users to easily share visual information across the enterprise

Superior Performance

Configurable, super-scalable applications with exceptional performance.

Rich interactive viewing solutions

Improve productivity and reduce cost and reliance on physical prototypes.

High-definition visual collaboration

View, markup, and share a broad range of complex graphical files

Leverage your MCAD/ECAD data throughout the product development process

Reuse the same data among multiple visualization applications.
