PTC University

Helping you become more productive with Pro/ENGINEER, Windchill, Arbortext, Mathcad and ProductView

PTC University is the best choice for people who want to get the most out of PTC products. Only PTC University uses the innovative Precision Learning Methodology to develop role-based material that focuses on what you need to know to be more productive. PTC University has direct access to the PTC product development and PTC consulting organizations to ensure your courses include the most up-to-date product information plus best practices derived from thousands of customer deployments.

PTC has constructed comprehensive learning paths for various roles that may play a part in your organization. These paths consist of courses that may be available in live classroom, live virtual classroom, and/or self-paced delivery formats.

Live Classroom

These in center courses are taught in-person by a certified PTC University instructor at a location near you.

Web-based Training

A comprehensive collection of self-paced courses, complete with recorded lectures and demonstrations, HTML based lecture reviews, lab exercises and learning assessments. Recorded Virtual Classroom Material contains a host of specialty topics taught with an instructor allowing you to learn at your own pace and gives you the ability to stop and restart training at any time according to your busy schedule. These courses are typically available through the PTC University eLearning Libraries.

eLearning Libraries

PTC University understands that today's business environment sometimes doesn't allow you to be off-site for multiple days to attend a traditional training class. That's why PTC University has eLearning Libraries—an online alternative to the instructor-led class that offers the same high level of quality and content. Now you can get the training you need, right from your desk, for less than the price of most traditional classroom courses. PTC University eLearning Libraries provide 24/7/365 access to an entire collection of Web-based training courses. The COACH for Pro/ENGINEER Library offers learning through a textual format. This reference-type library may be more helpful for advanced students who prefer assistance on specific topics. It's training when and where you need it.

eLearning Libraries include:

- An entire collection of easy to use, self-paced, modular courses covering both basic and advanced capabilities
- Recorded virtual classes so you can experience an instructor led course on your own time
- Benchmark assessments, using our proprietary Pro/FICIENCY tool, to test your level of proficiency
- Full access to the PTC University Precision LMS system to easily manage your personal or team development plans
- And more . . .

eLearning Libraries are available within the following product families

Pro/ENGINEER • Windchill • Arbortext • Mathcad

Pro/FICIENCY

PTC Pro/FICIENCY, an optional component of the PTC University Precision LMS, offers skills assessment and development planning. It helps improve the knowledge and productivity of your software users by measuring the effectiveness of education programs. By accurately measuring the proficiency of users and comparing their test results against industry-wide or organizational standards, Pro/FICIENCY delivers a clear development path to improved user productivity.

Pro/FICIENCY includes:

Evaluations of a student's retention both during and after courses, for reinforcement and future development

- Over 7,000 questions and practical exercises
- Benchmarks, so students can compare scores against other participants
- Assessments that are performance-based, so students and their managers can assess user knowledge based on real-life exercises
